## GSII Servo Stacker

Stacks at a rate of 80 pieces per minute per lane, is ideal for large products like pita bread and pizza crusts.

### Flexibility by Design

Forpak Stackers are the industry's only stackers with built-in flexibility to handle products of most sizes and shapes with minimal changes.

A key component of Forpak's Flexibility by Design is the Automated Interleaving (cardboard or paper feed) option. With this option - available on Model GSII - cardboard or paper is interleaved between individual product pieces, thereby eliminating the need for manual interleaving at this stage of the process.

Forpak has incorporated state-of-the-art technology to provide systems that can:

- Reduce labor costs by 30-50%
- Reduce exposure to human contamination
- Reduce Workman's Compensation claims by minimizing repetitive motion
- Allow for increasing production speed and downstream automation
- Bypass staker option available to allow products that do not require stacking to pass through the staker untouched

### Product Features

- Multiple product recipe controls
- Forpak stackers can be manufactured with 1 to 3 lanes
- All stackers are built to last with stainless steel construction
- Variable conveyor speed is standard in Forpak stackers
- Full wash down capability to simplify cleaning protocols
- Servo controlled actuators for stack building motion

### Hygienic and Sanitary Design

- NSF 3A Standard
- BISSC Standard for Baking
